

Ever been bitten and scratched by a cat?

Not nice is it?

Reduce work place injury by learning how to read cat body language and handle and care for them effectively to avoid those nasty scratches and bites whilst also learning how to accommodate their needs and make them as comfortable as possible during the trip to the clinic. This comprehensive 3 hour workshop covers feline behaviour and communication, body language, learning theory basics, helping you maintain a low stress clinic environment, how to handle 'difficult' cats, and a practical session demonstrating some helpful towel wrapping techniques.
